

SQL Sales Analytics Report

Decodelabs Data Analytics Internship — Project 1 (Mercy Adventure Database)

This report presents a four-part SQL analysis performed in SQL Server Management Studio (SSMS) on a 1,200-transaction sales dataset. The analysis covers corporate KPIs, marketing channel performance, product category rankings, and order fulfillment status — built to support data-driven business decisions.

TASK 1 | Baseline High-Level Corporate KPIs

SQL QUERY

```
SELECT
    COUNT(OrderID) AS Total_Orders,
    SUM(TotalPrice) AS Total_Revenue,
    AVG(TotalPrice) AS Average_Order_Value,
    SUM(Quantity) AS Total_Items_Sold
FROM [MERCY ADVENTURE].[dbo].DATA;
```

RESULT

Total Orders	Total Revenue	Avg Order Value	Total Items Sold
1,200	\$1,264,761.96	\$1,053.97	3,535

Insight: The business processed 1,200 orders generating over \$1.26M in revenue, with an average order value of roughly \$1,054 — indicating a high-ticket product mix.

TASK 2 | Marketing Acquisition Channel Performance Matrix

SQL QUERY

```
SELECT
    ReferralSource,
    COUNT(OrderID) AS Total_Orders,
    SUM(TotalPrice) AS Total_Revenue,
    ROUND(AVG(TotalPrice), 2) AS Average_Order_Value
FROM [MERCY ADVENTURE].[dbo].DATA
GROUP BY ReferralSource
ORDER BY Total_Revenue DESC;
```

RESULT

Referral Source	Total Orders	Total Revenue	Avg Order Value
Instagram	259	\$275,285.45	\$1,062.88
Email	250	\$261,808.55	\$1,047.23
Google	241	\$250,441.48	\$1,039.18
Facebook	228	\$250,410.90	\$1,098.29
Referral	222	\$226,815.58	\$1,021.69

Insight: Instagram leads in both order volume and total revenue, while Facebook drives the highest average order value — suggesting different channels attract different buyer intent.

TASK 3 | Product Category Volume & Value Rankings

SQL QUERY

```
SELECT
    Product,
    COUNT(OrderID) AS Total_Orders,
    SUM(Quantity) AS Total_Quantity_Sold,
    SUM(TotalPrice) AS Total_Revenue,
    ROUND(AVG(TotalPrice), 2) AS Average_Order_Value
FROM [MERCY ADVENTURE].[dbo].DATA
GROUP BY Product
ORDER BY Total_Revenue DESC;
```

RESULT

Product	Orders	Qty Sold	Total Revenue	Avg Order Value
Chair	178	562	\$195,620.11	\$1,098.99
Printer	181	542	\$195,612.61	\$1,080.73
Laptop	173	535	\$192,126.56	\$1,110.56
Tablet	179	497	\$186,568.95	\$1,042.28
Monitor	163	480	\$175,651.41	\$1,077.62
Desk	170	508	\$167,459.93	\$985.06
Phone	156	411	\$151,722.39	\$972.58

Insight: Chairs and printers top the revenue rankings despite moderate order counts, while laptops post the highest average order value of any category — a strong margin driver even with fewer units sold.

TASK 4 | Operational Fulfillment Risk & Funnel Audits

SQL QUERY

```
SELECT
    OrderStatus,
    COUNT(OrderID) AS Total_Orders,
    SUM(TotalPrice) AS Total_Revenue,
    ROUND(AVG(TotalPrice), 2) AS Average_Order_Value
FROM [MERCY ADVENTURE].[dbo].DATA
GROUP BY OrderStatus
ORDER BY Total_Orders DESC;
```

RESULT

Order Status	Total Orders	Total Revenue	Avg Order Value
Cancelled	250	\$276,396.21	\$1,105.58
Returned	247	\$243,277.70	\$984.93
Pending	237	\$256,328.15	\$1,081.55

Order Status	Total Orders	Total Revenue	Avg Order Value
Shipped	235	\$246,159.58	\$1,047.49
Delivered	231	\$242,600.32	\$1,050.22

Insight: Cancelled orders represent the single largest status group by both volume and revenue at risk (\$276K) — higher than fully Delivered orders. This flags a fulfillment funnel issue worth investigating further.
